

How to use Forest Access Management (FAM)

A guide for application administrators

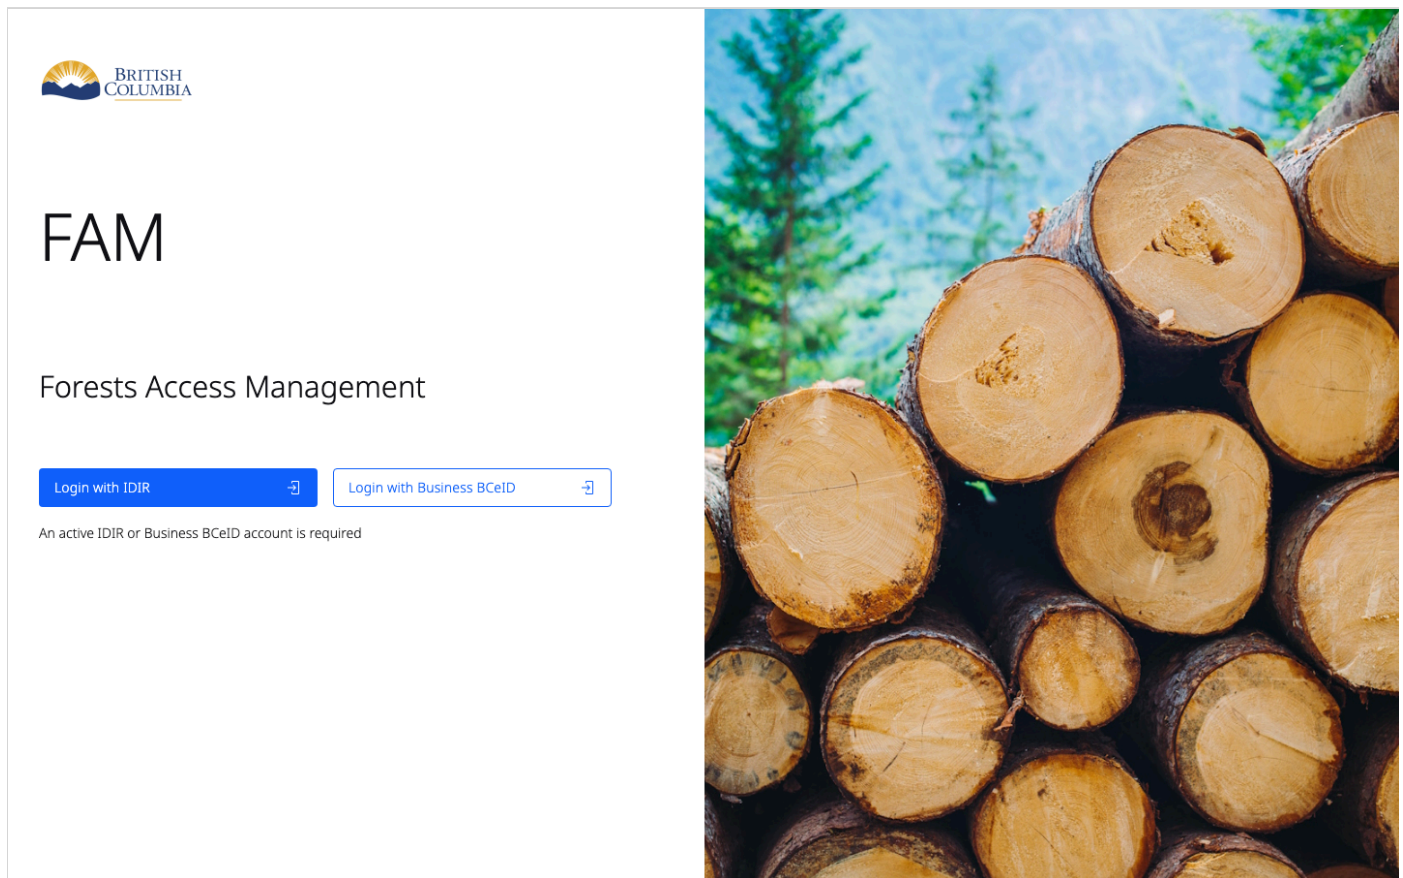

Forest Access Management (FAM) is how access to Ministry of Forests applications is granted and removed. As an application administrator you decide who holds which roles in your application, and who else may hand those roles out.

For support using FAM, email Heartwood@gov.bc.ca.

Accessing FAM

You need permission before you can use FAM. If you do not have it, email Heartwood@gov.bc.ca.

Once you have access, sign in at forestaccess.nrs.gov.bc.ca with your IDIR.

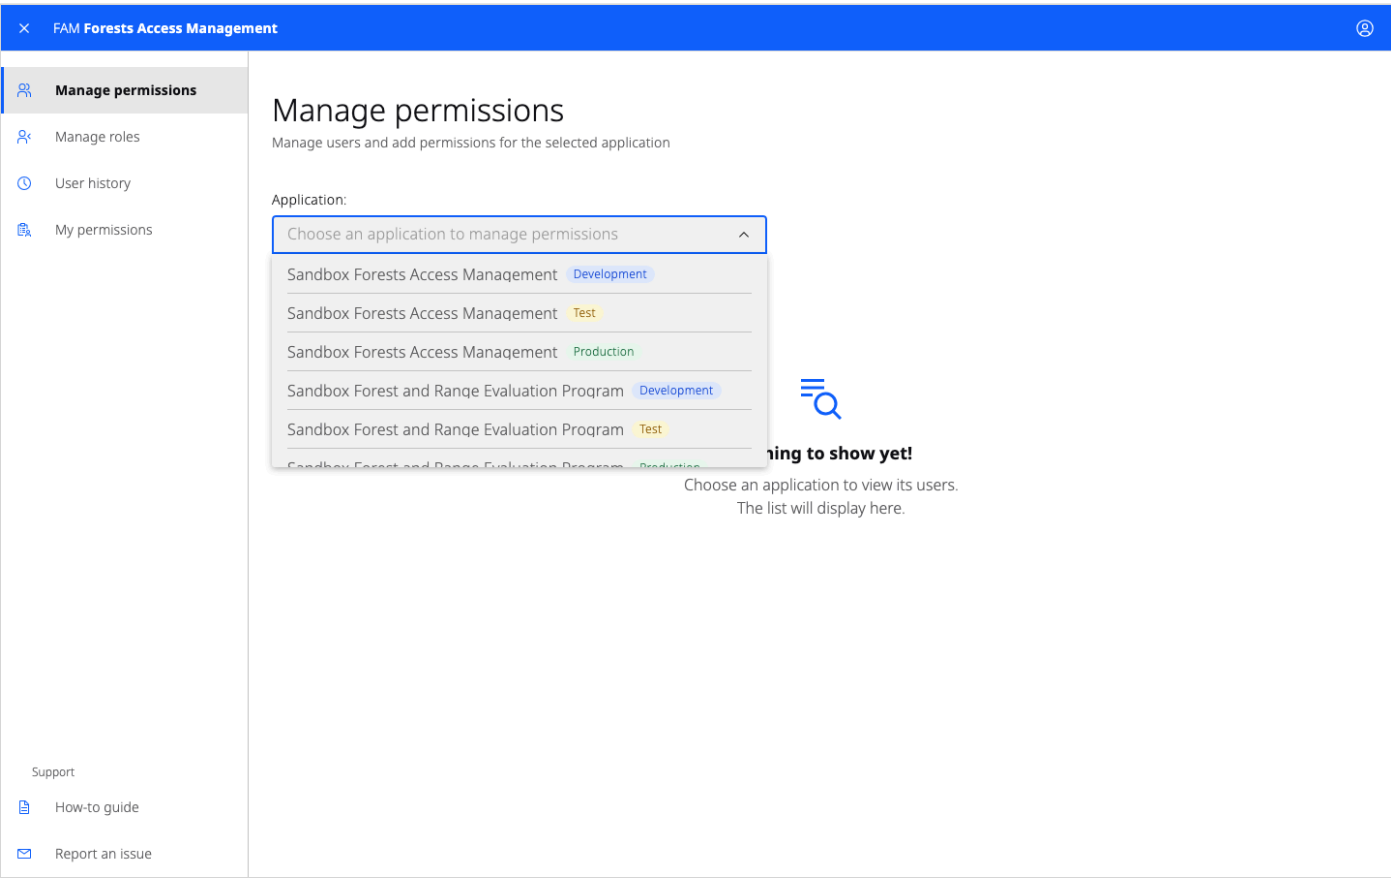

Choosing an application

Select the application you want to manage from the **Application** drop-down. You'll only see the applications you administer.

Each item in the list shows the application name and a coloured pill for the environment: Development, Test, or Production. Environments are managed separately, so you need access in each one. Giving someone access in Test does not give them access in Production.

Note: For security reasons, you can't change your own permissions. If you need a role for yourself, ask another administrator to add it.

The tabs

With an application chosen, the screen offers a tab per kind of access:

Tab	Who is listed
Users	Everybody holding a role in the application
Delegated admins	People who may grant a subset of those roles to others
Application admins	People who administer the application, as you do
DevOps admins	People who may define what roles the application has

Adding a user's permissions

- 1. Choose the **Users** tab.
- 2. Select **Add permission** at the right of the screen.

Finding the user

- 1. Choose **IDIR** or **Business BCeID**.
- 2. Type the person's username in the field and select **Search**.
- 3. Choose the right person from the results and select **Confirm**.

Grant permission

A surname search can return hundreds of people. Use the filter above the results to narrow them, and sort by any column heading. Check the username and email before confirming — they are how you tell two people with the same name apart.

Cancel

Confirm

You can select more than one person. Everybody chosen gets the same roles, which is the quick way to set up a team.

How to use FAM - a guide for application administrators

5

Choosing the roles

1. Select the roles you want to grant.
2. If a role needs a district, region or organization, choose those as well. Use commas to enter several client numbers at once.
3. Set an expiry date if the access should end on a particular day. Leave it empty for access that does not expire.
4. Uncheck **Send email to notify user** if you do not want FAM to email them.
5. Select **Grant permission**.

1 user will receive the same permissions configured below

Select the roles to grant

Everybody chosen above gets every role selected here. Pick as many as they should have.

Role	Description	Scope
☒ Guide role E2EMU7SAYUB2N3	Used to illustrate the how-to guides.	Whole application
☐ Administrator	Allow full access to FREP	Whole application
☐ Viewer	Viewer	Per district Per organization

Granted for the whole application:

Guide role E2EMU7SAYUB2N3

Set an expiry date

Expiry date (optional)

yyyy-mm-dd

Access lasts to the end of the day chosen. Leave blank for access that does not expire.

☒ Send email to notify user

This will create 1 permission.

Cancel

Grant permission

How to use FAM - a guide for application administrators

6

FAM returns you to Manage permissions and confirms what it granted. A grant of one role to one person names both; a larger one is summarised — “5 roles granted to 15 users in FREP (TEST)” — rather than listed. If part of it failed, the banner says so and names what did not go through.

Reviewing and removing a user's permissions

A permission you have just granted appears at the top of the table with a green **New** pill.

- To see everything that has happened to somebody's access, select the clock icon under the **Action** column.
- To change what they hold, select the edit icon under the **Action** column.
- To take the access away, select the trash can icon under the **Action** column and confirm.

Permission granted
Guide role E2EMU7SAYUB2N3 was granted to Jane Smith (JSMITH) in Sandbox Forest and Range Evaluation Program (TEST).

Adding a delegated administrator

A delegated administrator can grant and revoke only the roles you delegate to them. They cannot appoint other administrators.

Delegated administrators can be internal or external:

- **External** — give someone in an external organization a delegated admin role for a specific client number, so they can manage users within their own organization.
- **Internal** — give someone in the ministry a delegated admin role for their area, for example a district user who manages access for other users in that district.

1. Choose the **Delegated admins** tab.
2. Select **Add delegated admin**.
3. Find the person as above.
4. Choose the roles they may hand out. For a scoped role, choose the scope values too — delegating Submitter for one district does not let them grant it for another.
5. Select **Grant delegated admin**.

Select the roles they may grant

A delegated admin can grant and revoke the roles chosen here, and nothing else. Pick as many as they should be able to hand out.

Role	Description	Scope
☐ Administrator	Allow full access to FREP	Whole application
☐ Viewer	Viewer	Per district Per organization

Cancel

Add delegated admin

Before appointing a Business BCeID delegated administrator

1. Make sure the Business Profile Manager exists in the BCeID white pages. The profile manager is the highest authority in that organization.
2. Appoint a Business BCeID delegated administrator only when the profile manager asks for it — either for themselves or for somebody else in their organization.
3. Confirm the candidate has been trained on FAM and understands what the role carries. They will be asked to accept the terms of use the first time they sign in.

Application administrators

An application administrator has the same authority you do, including appointing delegated administrators. **Application administrators cannot create new application administrators.**

The **Application admins** tab shows who administers this application. To have someone added or removed, email Heartwood@gov.bc.ca — only a FAM administrator can change that list.

Application administrators must be IDIR users.

Who can grant any role in Sandbox Forest and Range Evaluation Program (TEST), and appoint delegated admins

User Name	Domain	Full Name	Email	Action
Sandbox Forest and Range Evaluation Program (TEST) has no administrators at this level				

Bulk user upload

If you have a CSV file with many users to set up — for example, an export from ADAM — use **Bulk grant** from Manage permissions.

1. Download the template and prepare your CSV. It names the user, the role, and the scope it applies to.
2. Upload the CSV.
3. Review what FAM proposes.
4. Apply it.

Rows for access someone already holds are skipped rather than granted again.
