

How to use Forest Access Management (FAM)

A guide for delegated administrators

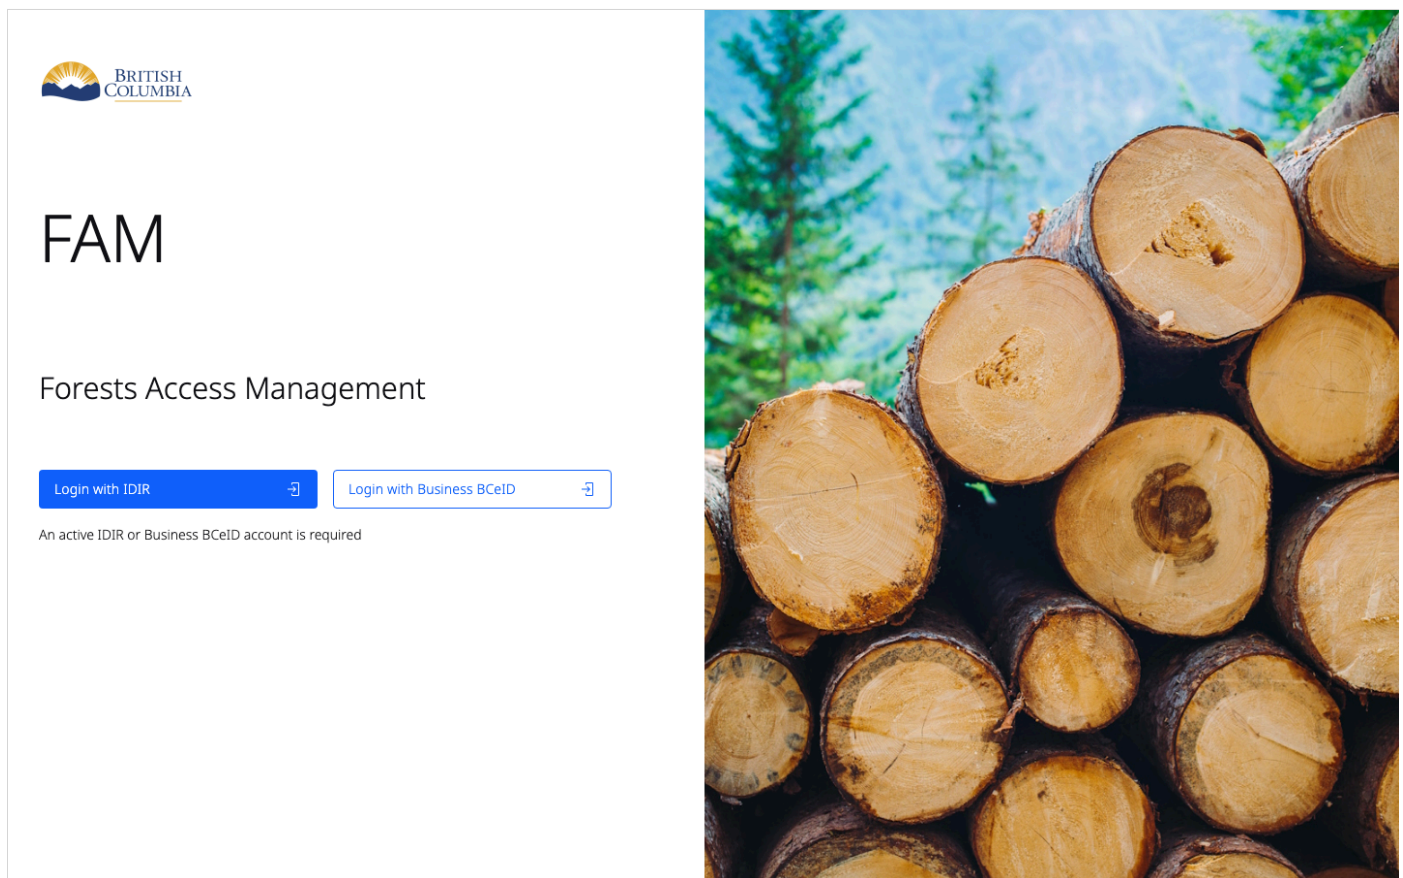

Forest Access Management (FAM) is how access to Ministry of Forests applications is granted and removed. As a delegated administrator you give people in your organization the roles they need in one application, and take them away again when they no longer need them.

For support using FAM, email Heartwood@gov.bc.ca.

Accessing FAM

You need permission before you can use FAM. If you do not have it, ask the application's administrator, or email Heartwood@gov.bc.ca.

Once you have access, sign in at forestaccess.nrs.gov.bc.ca with your Business BCeID.

Accepting the terms of use

The first time you sign in as a delegated administrator, FAM shows the terms of use and asks you to accept them. You cannot manage access until you do.

The terms set out what your organization agrees to when you manage access in FAM — keeping user access up to date, removing access for people who leave, and using FAM and the applications safely and lawfully. By accepting, you confirm you have authority to agree on your organization's behalf.

You can read the terms again at any time from your profile menu in the top right. If the terms change later, you are asked to accept them again.

Choosing an application

Select the application you want to manage from the **Application** drop-down. You'll only see the applications you can grant access to.

Note: For security reasons, you can't change your own permissions. If you need a role for yourself, ask another administrator to add it.

ning to show yet!

Choose an application to view its users.

The list will display here.

Adding a user's permissions

- 1. With your application selected, choose the **Users** tab.
- 2. Select **Add permission** at the right of the screen.

Finding the user

- 1. Type the person's Business BCeID username in the field.
- 2. Select **Search**.
- 3. Choose the right person from the results and select **Confirm**.

Only people within your own organization are returned. If you search for somebody at another business, FAM tells you so rather than showing you their details.

The screenshot shows the 'FAM Forests Access Management' interface. On the left is a sidebar with navigation links: 'Manage permissions' (selected), 'Manage roles', 'User history', 'My permissions', 'Support', 'How-to guide', and 'Report an issue'. The main content area is titled 'Add permission' with a subtitle 'Grant a role to Sandbox Forest and Range Evaluation Program (TEST)'. Below this is a 'Select users' section with two dropdown menus for 'User domain' (set to 'IDIR') and 'Type' (set to 'Username'). A search input field contains 'JSMITH' and has a 'Search' button. At the bottom right are 'Cancel' and 'Grant permission' buttons.

The search returns everyone matching what you typed, which for a common surname can be hundreds of people. Use the filter above the results to narrow them, and sort by any column heading. Check the username and email before confirming — they are how you tell two people with the same name apart.

Choosing the roles

1. Select the roles you want to grant. You can grant more than one at a time.
2. If a role needs an organization, choose it as well. Use the search box to find one by name or client number.
3. Set an expiry date if the access should end on a particular day. Leave it empty for access that does not expire.
4. Uncheck **Send email to notify user** if you do not want FAM to email them.
5. Select **Grant permission**.

Username	Full Name	Email	
JSMITH	Jane Smith	jane.smith@gov.bc.ca	Remove

1 user will receive the same permissions configured below

Select the roles to grant

Everybody chosen above gets every role selected here. Pick as many as they should have.

Role	Description	Scope
☒ Guide role E2EMU7SAYUB2N3	Used to illustrate the how-to guides.	Whole application
☐ Administrator	Allow full access to FREP	Whole application
☐ Viewer	Viewer	Per district Per organization

Granted for the whole application: Guide role E2EMU7SAYUB2N3

Set an expiry date

Expiry date (optional)

yyyy-mm-dd

Access lasts to the end of the day chosen. Leave blank for access that does not expire.

☒ Send email to notify user

This will create 1 permission.

How-to guide

Report an issue

Removing a user's permissions

1. Select the application from the drop-down.
2. Find the person in the table. The search box above it matches names, usernames, emails, roles and scopes.
3. Select the trash can icon under the **Action** column at the right of their row.
4. Confirm the removal.

FAM confirms when the access has been removed.

User history

User history in the left-hand navigation shows what has happened to one person’s access: what was granted or removed, when, and who did it.

Choose the application, then the person. The same history is reachable from the clock icon beside somebody’s row on Manage permissions.
